

## Mobile Apps

With the Alarm.com app, your customers can use a wide array of devices to manage and control their home or business, anytime and anywhere.

### Smartphone and Tablet

The Alarm.com mobile app provides real-time on-the-go awareness with iOS and Android devices.

- Receive instant notifications and alerts
- Perform one-touch commands
- Get at a glance views on one screen
- Stream live video feeds
- Arm and disarm the system remotely
- Set location-based automation
- View smart capture image gallery
- Control lights, locks, thermostats and garage doors

---

## Smartwatch

Your customers can get instant awareness and control right from their wrist with the Alarm.com app for Apple Watch and the Pebble Time Smartwatch.

- Arm or disarm the system
- Control lights, locks and thermostats
- Manage garage door access

Additionally, Apple Watch users can view live video and use actionable notifications right from their device.

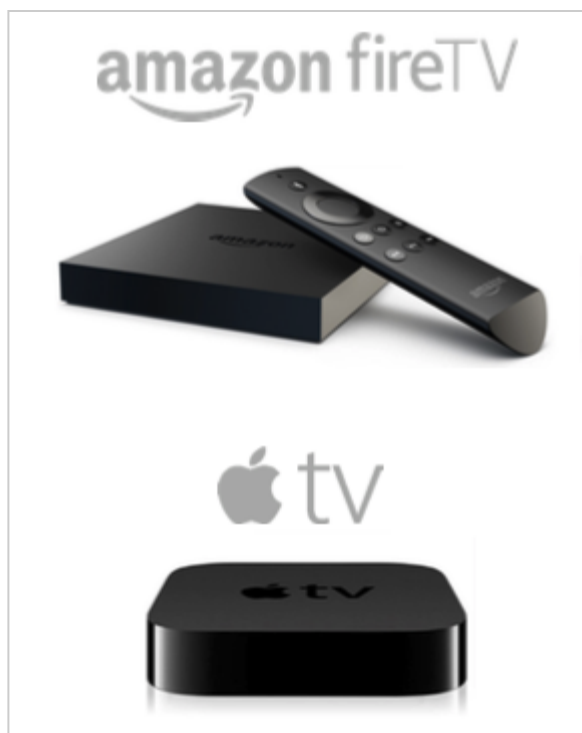

---

## TV Monitoring

Using the Alarm.com app on either Amazon FireTV or Apple TV, your customers can have instant access to their Video Monitoring feeds right from their couch. Customers just need an Amazon FireTV, Amazon FireTV Stick or a 4th generation Apple TV to get started.

- View and control any camera on their account
- Create a closed-circuit view of the entire home, with up to 4 cameras displayed
- Lock certain cameras in place, so that they don't rotate off-screen if using more than 4 cameras
- Get multi-system support

---

## Voice Control

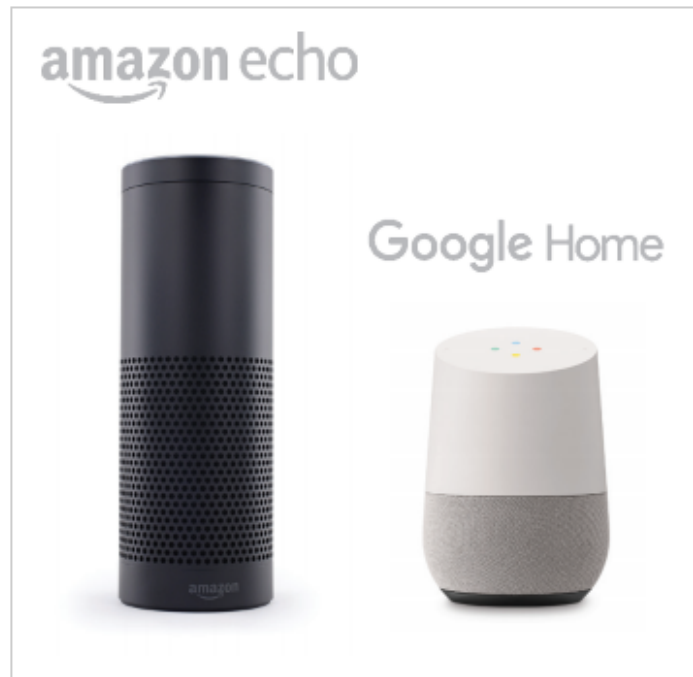

Alarm.com's Amazon Alexa Skill and Google Assistant Action both provide your customers with a hands-free, digital assistant for the home. Integrated with the Alarm.com platform, devices like the Amazon Echo and Google Home give your customers voice-activated home automation. Your customers can ask their Alarm.com powered system to perform a number of automation commands or check the status of smart home devices.

Tell Alexa or Google Assistant to perform any of the following:

- Turn on the living room lights
- Lock the front door
- Turn down the thermostat
- Close the garage door
- Arm Stay the security system
- Record a video clip

You can also ask Alexa or Google Assistant any of the following:

- Are all the doors locked?
- What's the temperature in here?
- Is my security system armed or disarmed?
- Is my garage door open?

With all of these apps, there is no need for you to invest in additional hardware — if your new or existing customers have these devices, they can easily integrate them with their Alarm.com platform for an even richer Smart Home experience.
