Enhance Your Customers Experience with New Apple Watch App

At Alarm.com, we believe that the Smart Home should provide simple, powerful solutions to real consumer challenges. Help your customers get an integrated Smart Home experience that delivers personalized, actionable information in an intuitive and meaningful way.

Our innovative app for the Apple Watch enables you to offer your customers new ways to interact with their homes. Designed with Apple Watch's quick and light interactions in mind, our app controls devices across the home and provides a real-time view with customized alerts of what's happening in the home. Your customer will instantly see what's happening with just a flick of their wrist!

Your Home at a Glance

A Glance is a single screen that provides key info about an app "at a glance." This is a brand new feature introduced by Apple for the Apple Watch. When the Apple Watch is in "locked" mode, users can browse Glances by swiping the screen from left to right. With our app, your customers can quickly check the status of their system.

From the app, your customers can:

- Arm or disarm the system
- Control lights
- Control locks
- Control thermostats
- View live video
- Manage garage door access

Actionable Notifications

Your customers can receive personalized, location-based reminders and alerts on their Apple Watch. With Actionable Notifications, users can take action or respond right from their wrist—no need to navigate to another screen or even open the app!

This new mobile platform will help capture growing consumer interest as well as deeply engage current subscribers to make them even stickier.
